EDANUSA

SA-10

Ambulatory Blood Pressure Monitor

The SA-10 is a 24-hour ambulatory blood pressure monitor with stylish design, intelligent software, state-of-the-art blood pressure monitoring technologies, developed to avoid white coat hypertension, masked hypertension and sustained hypertension. With the help of SA-10s powerful analysis software, clinicians will manage patients' cardiovascular risks with ease and make clinical decisions with confidence.

Feature Highlights:

- · Lightweight, compact and quite for better patients compliance
- Large blood pressure measurement range from 10mmHg to 290mmHg
- Proprietary algroithm with excellent motion resistance performance
- Data protection from power outage
- Auto re-measurement on failed measurement attempt

Self-locking structure

300 NIBP memory

IP22

Wireless transmission

Glass panel

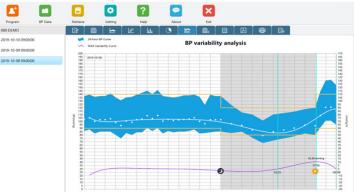

Lightweight Design <170g

Powerful Software for Comprehensive Analysis

With the aid of the SA-10s powerful analysis software, the clinicians can have a better insight into the variation of patient's blood pressure within 24 hours, easily identifying the periods when the blood pressure values are above limits. The informative statistical table provides a clear presentation of the measurement summary throughout the day.
